

Programme Overview

This document contains everything prepared for you in this cohort.

Delivery Mode	Virtual (Zoom)
Dates	• 3rd and 4th October 2026 • 10th and 11th October 2026
Your Trainer	Pharm. Amara Owunwa

What This Programme Covers (CORE CURRICULUM)

PHASE ONE: Four Intensive Training Days

DAY 1

The Skin, Skin Barrier, Skin Types & Steroid Stewardship (for foundation and safe practice)

- Skin anatomy and physiology relevant to pharmacy practice
- Understanding the skin barrier
- Skin types and their practical implications
- Appropriate steroid and Steroid combination products use vs misuse
- Steroid stewardship and pruritus
- When to manage, co-manage, or refer

DAY 2

Inflammatory Skin Conditions

- Dermatitis spectrum
- Psoriasis
- Rosacea
- Pharmacy-appropriate management
- Red flags and referral thresholds

DAY 3

Acne & Pigmentary Disorders

- Acne assessment and treatment approach
- Common reasons acne treatment fails

- Post-inflammatory hyperpigmentation
- Other common pigmentary concerns
- Skin-of-colour considerations
- Patient expectations and counselling

DAY 4

Skin Infections + AI-Assisted Consultation

- Common skin infections and treatment
- Differentiating between bacterial, fungal and inflammatory presentations
- Appropriate pharmacy management
- AI-assisted consultation
- Practical use of AI in skin-health practice

Note: Cosmetic product literacy, clinical decision-making, patient counselling, referral thresholds, co-management, and case discussions would happen across **ALL** modules.

By the end of this training, professionals learn to:

- Assess common skin presentations and select appropriate skincare products
- Read ingredient lists
- Understand what cosmetic ingredients actually do
- Make safer recommendations
- Identify inappropriate combinations
- Match products to skin type, condition and treatment goals
- Recognize when a condition is out of scope and requires referral
- Use a structured consultation process

PHASE TWO: Practical Assignments

Learning continues after the live sessions. **Professionals will be assigned to small clinical circles**, as these assignments are designed to reinforce learning through collaboration and problem-solving rather than passive revision.

PHASE THREE: SIMTI Research Challenge

Each team will receive a skin-health research question. The objective is not simply to answer the question but to learn how pharmacists contribute to evidence generation. Exceptional teams

may be invited to work with the SIMTI research team to develop further their work for potential submission to a peer-reviewed journal.

PHASE FOUR: The SIMTI Skin Health Summit 2026

Cohort 2 concludes with the inaugural SIMTI Skin Health Summit. This is more than a closing ceremony.

It is a gathering of pharmacists, clinicians, educators, and professionals committed to advancing skin health practice. Selected participants will have the opportunity to present their research posters during the summit.

Further details will be shared exclusively with registered participants.

Your Session Schedule

This training is spread across multiple sessions so that you have time to absorb, practise, and return with questions.

Note: You will **collaborate with other participants** on research projects and case studies. Come prepared to contribute actively and work effectively as part of a team.
